

L. Mulholland

Description:

A registered plumber with The Institute of Plumbing, providing domestic, commercial and industrial plumbing services.

Leslie Mulholland is a registered plumber with The Institute of Plumbing and has been operating for over 15 years. Leslie and his team provide heating and plumbing services to the domestic, commercial and industrial sector. Basically, no job is too small and no job is too big.

In addition to the usual heating and plumbing services that is provided, Leslie is also a supplier and installer of renewable energy heating systems. In addition of being greener to the environment, other benefits include cheaper running costs. Here are the other products and services that are supplied and installed;

Underfloor Heating Systems

Underfloor heating systems have many benefits and provides the warmth that radiates around you and saves the space that radiators take up and is more efficient. We design, implement and install to the domestic and commercial sector.

Biomass and Multifuel Stoves

Cosy, stylish and traditional - biomass stoves can dramatically reduce your bills and save masses of CO₂. Think you could warm to the idea? Demand for biomass stoves (or wood burners) is on the up. An attractive wood burning stove can save 1,000kg of CO₂ a year - more if you switch your whole central heating system to biomass. We supply and install biomass and multifuel stoves, suited to your surroundings and heaters.

Solar Panels

The use of solar panels to heat water is becoming increasingly popular around the world due to the energy and money saving associated with this

method.

A good solar hot water panel system is able to provide an average household with around a third of its annual hot water supply. While this may not sound much, it can reduce energy costs by a considerable amount.
